

NOAA Weather Radio Recordings

[Les Rayburn, N1LF](#)

This is off-topic, so I hope you'll forgive me. But many in the WTFDA also enjoy chasing DX on the NOAA Weather Radio band.

Since the "voice" used in the stations is the same, and they ID only once in each "loop" they can be difficult to ID. Two of the best aids to overcome this are websites that specialize in this information.

<https://weatherradio.net/>

Ran by Joel Nelson, this site includes transcripts of most transmitters.

[Weather Radio Audio](#)

Ran by Matt Sittle, this site relies more of audio recordings of hundreds of transmitters, mostly recorded by Matt himself.

Both benefit from updates, as formats can change often.

Could I ask interested members to record any NOAA stations in range of your station and send me an MP3 recording of a complete loop of each? A loop lasts about 15 minutes. You can email them to me directly so we don't take up bandwidth here.

I'd be grateful for any help members can provide.
