

Clear Channel Stations

The AM band is allocated into three categories: **local**, **regional**, and **clear** channels.

- **Local channels** are limited to a maximum transmitter power of 1000 watts and use a non-directional antenna.
- **Regional channels** (Class B) use higher transmitter powers, typically up to about 20,000 watts (though some at 50,000 watts), and directional antennas.
- **Clear channel** stations (Class A) can use 50,000 watts of power. They use both non-directional and directional antennas. In the past, there were fewer clear channel stations at one time as only one station was assigned to each frequency. Today, with the use of directional antennas, two or more stations may be on the same frequency without interfere with other 50,000 watt stations.

North America AM radio stations with at least 50,000 watts nighttime broadcast power (Class A and B).

Frequency	Call Sign	Location
540 kHz	CBK	Watrous, Saskatchewan, CA
	CBT	Grand Falls, Newfoundland, CA
	XEWA	San Luis Potosí, MX
580 kHz	KMJ	Fresno, CA
630 kHz	XEFB	Monterrey, MX
640 kHz	CBN	St. John's, Newfoundland, CA
	KFI	Los Angeles, CA
650 kHz	KENI	Anchorage, AK
	WSM	Nashville, TN
	CFFR	Calgary, Alberta, CA
660 kHz	KTNN	Window Rock, AZ
	WFAN	New York, NY
670 kHz	KBOI	Boise, ID
	WSCR	Chicago, IL
	KNBR	San Francisco, CA
680 kHz	WPTF	Raleigh, NC
	WRKO	Boston, MA
690 kHz	XETRA	Tijuana, MX
700 kHz	WLW	Cincinnati, OH
	KIRO	Seattle, WA
710 kHz	WAQI	Miami, FL
	WOR	New York, NY
720 kHz	WGN	Chicago, IL
